

### **Setting up Map My Trip with preloaded destination addresses:**

Map My Trip can be launched with destination information preloaded into the web page. For instance, if MoDOT wanted to link to Map My Trip with the information for the District Office already preloaded, they would make the hyperlink:

<http://dist6.modot.mo.gov/mapmytrip/MapMyTrip.aspx?daddress=1590%20woodlake%20dr%20ave&dcity=chesterfield&dstate=mo>

Parameters for pre-loading origin or destination information are as follows:

oaddress= origin street address  
ocity= origin city  
ostate= origin state  
daddress= destination street address  
dcity= origin city  
dstate= origin state

spaces need to be represented by %20

each parameter key/value pair should be separated by an ampersand (&).

As you can see, information for both the origin and destination can be preloaded – for instance, between two hospitals that are on either side of the construction of I-64.

If you have problems, or questions, please e-mail Melissa Harris or Andrew Gates.
